Summary

Passionate full-stack developer with a strong interest in learning new things and a knack for problem-solving.

With over 3 years of programming experience and more than 1 year of professional work, I've learned to think like a programmer and develop complete projects — from front-end and back-end to database design and system architecture.

Serving as the CTO of my latest project, zbay, helped me realize my drive to achieve even more. I'm now seeking a remote job to continue learning and take one step closer to my goal of becoming a CTO at a well-known company.

I'm always open to connecting with people I can learn from and grow alongside.

Experience

IHChain
Full-stack Developer
Tehran
Feb 2025 - Present

Sazmanyar
Full-stack Developer
Tehran
Nov 2024 - Feb 2025
At Sazmanyar, I work on the WarehouseManagement (WHM) module, a system built with ASP.NET Core 8 and MS SQL Server. Initially, my role involved debugging issues in the newly developed module. Once the system stabilized, I transitioned into feature development, enhancing its functionality.

In addition to back-end development, I work with JavaScript and jQuery to manage logic and handle API calls on the front-end, ensuring seamless interactions between the user interface and the back-end.

Beyond development, I handle module installations for new clients and oversee updates for existing users, including deployments on the Microsoft SharePoint platform. Each update is first deployed on a test server, where our analysis team verifies its functionality. Any issues are reported back to me for debugging before final deployment. I also collaborate closely with the team to understand new feature requirements and ensure smooth implementation.

To maintain alignment, we hold weekly meetings every Thursday to review progress, discuss challenges, and plan upcoming tasks. This structured workflow ensures the WHM module remains reliable, efficient, and continuously improving.

ViraProcess
Back-end Developer
Tehran
Mar 2024 - Oct 2024
As a Back-End Developer at Vira Process, I work closely with both back-end and front-end technologies to deliver tailored digital solutions for our clients. My primary focus is on developing and supporting custom web applications using the .NET Core framework and C#. I contribute to our main ASP.NET MVC project, which is built on the nopCommerce platform, where I write custom plugins, optimize code, and make enhancements to meet the specific needs of clients.

- Key responsibilities include:
- * Developing and maintaining professional business websites for clients.
 - * Providing technical support to clients by resolving coding issues, implementing requested features, and optimizing performance.
 - * Customizing and extending the functionality of websites using ASP.NET and nopCommerce through plugins and code modifications.
 - * Collaborating on both back-end and front-end features to ensure seamless user experiences.
 - * Managing and optimizing databases using SQL Server Management Studio, including handling large datasets, performing queries, and updating records.
 - * Deploying changes and updates to client websites via remote desktop connections.

Throughout my time at Vira Process, I have worked on various client websites, including laftika.com, sabads.com, flormarshop.ir, rozhia.com, ban oobanoo.com, adeiye.com, synstyle.ir, barghino.ir, ketobama.ir, sibelbeauty.com, viola.co.com, and sepitam.com. Each project involved close collaboration with clients to tailor solutions that met their unique business requirements, improving functionality, user experience, and overall web performance.

Education

Amirkabir University of Technology - Tehran Polytechnic
Mathematics
Bachelor
Sep 2021 - Present
At Amirkabir University of Technology, I am pursuing a Bachelor of Science in Mathematics, with a strong emphasis on both pure and applied mathematical disciplines. Our faculty is uniquely integrated, fostering collaboration between Mathematics and Computer Science students. While my primary focus is on Mathematics, my interests and career aspirations have led me to also engage deeply with Computer Science. I have complemented my studies with coursework in programming, algorithms, and data structures, building a solid foundation that bridges the gap between mathematical theory and computational practice. This interdisciplinary approach equips me with the analytical and technical skills necessary for problem-solving in various fields.
